

a float

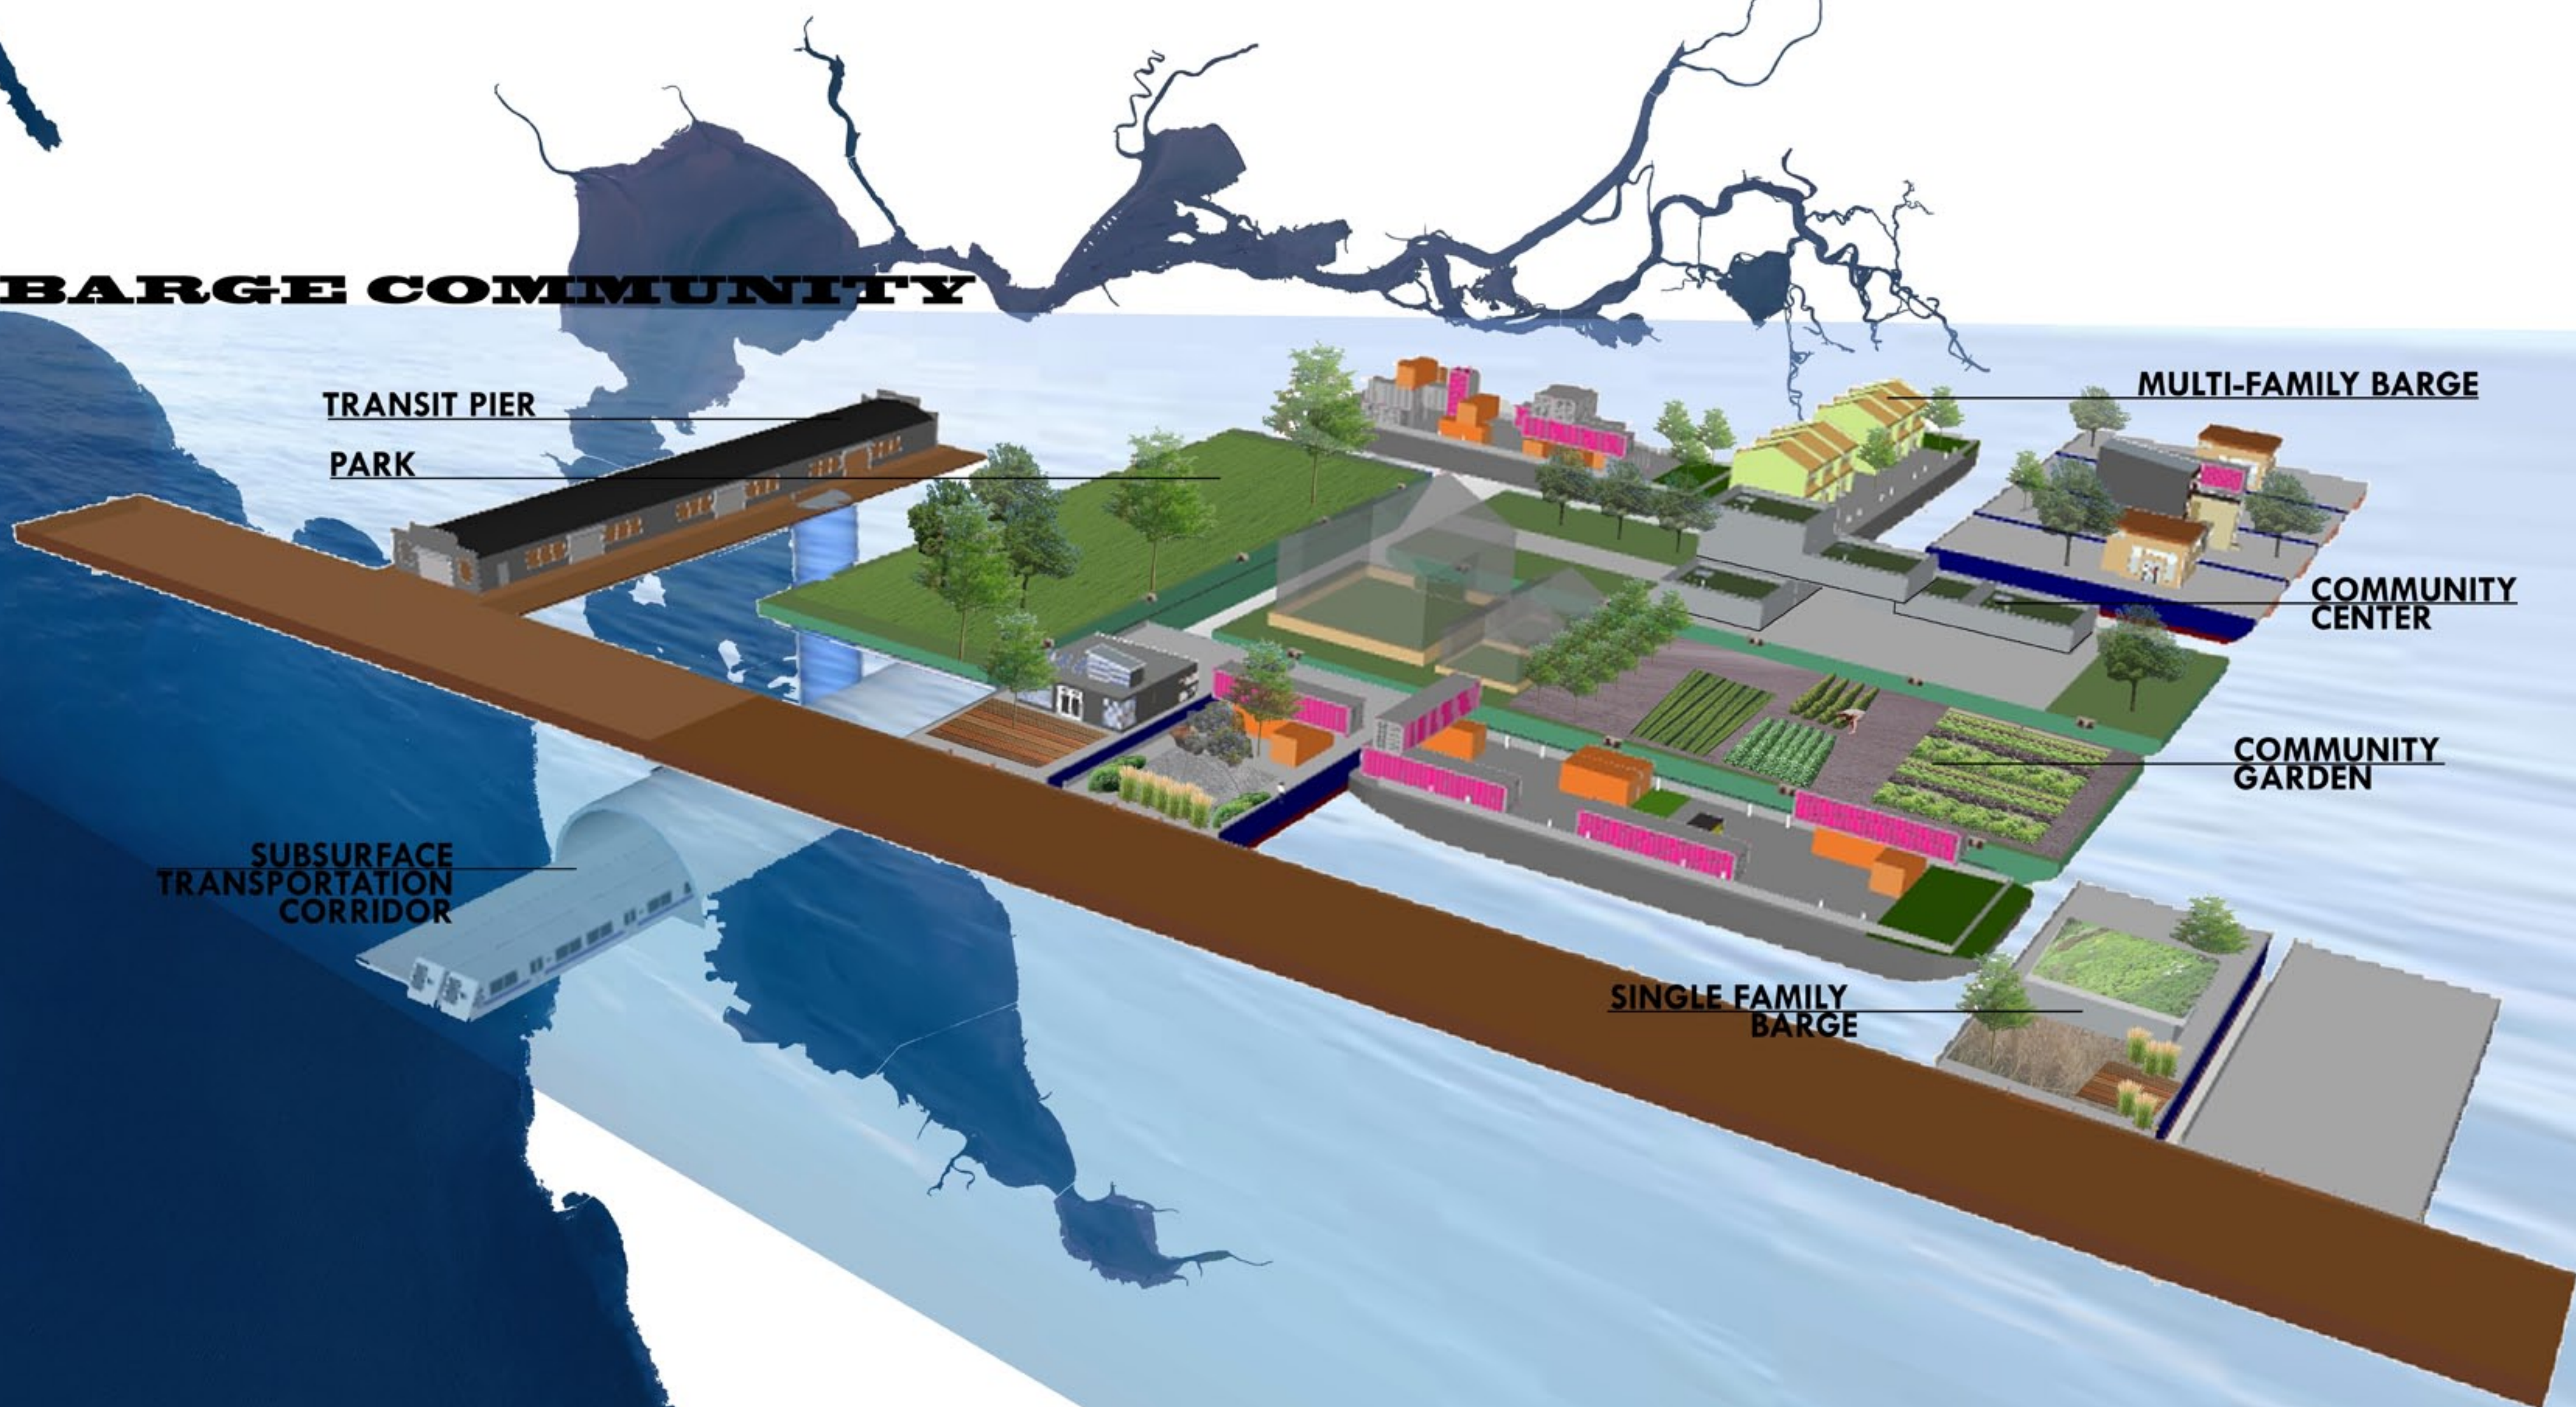

Being afloat is living on top of climate change through the promotion of environmentally and socially sustaining communities. Afloat accepts the reality of climate change, but does not contribute additional support to the factors influencing the global phenomenon. Barge ahead to new ideas of living spaces and community planning. Reused utility barges and shipping containers are self sustaining modules arranged to form unique communities.

BARGE SECTION

BARGE COMMUNITY

Barge communities are collections of modular spaces. Each modular unit provides an important function in the formation of community oriented neighborhoods. Flexibility in the layout of these communities allows for unique adaptable living spaces and facilitates authenticity. The shapes of these communities are representations of the residents and can incorporate all aspects of a healthy and vibrant city. Connections to urban and suburban areas are accomplished through a vast network of underground light rail.
